Executive Summary

Woodruff & Edwards, Incorporated (1867) of Elgin, Illinois began operation of this site in 1878 and is presently in operation. The landfill, which is the subject of this Preliminary Assessments Executive Summary, is located to the north of the plant property and was established in 1949 and is also currently in operation.

This site occupies approximately 1 1/4 acres in the SW 1/4, NW 1/4, NW 1/4, NE 1/4 of Section 14, Township 41 North, Range 8 East in Kane County.

Woodruff & Edwards is a producer of gray iron, alloyed and non-ferrous castings, patterns and ready to assemble castings. Production of these items result in the generation of baghouse dust (fly ash), spent foundry sand (core sand) and slag material. The fly ash is placed in "Tuf-Tote" plastic bags, brought to the site and covered with foundry sand. Any waste not generated by the foundry operation is removed to a permitted sanitary landfill by Elgin Wayne disposal contractors. In mid 1981 the property containing the landfill was given to the City of Elgin, whereby Elgin would be the owner and Woodruff & Edwards would remain as the operator. The landfill is now to a point where disposal of sand, ash and slag is occuring at approximately 10-20 feet from the bank of the Fox River in a number of places. Any contact with the river would be considered an—unacceptable practice and would be a violation of the Rules and Regulations.

In general this site has been a good performer except for the cronic lack of daily cover and deposition of sand, ash and slag at the top of the slope instead of the toe. On various occasions inspection reports noted that general refuse had been deposited on site which is an unauthorized activity at this site. In regard to the lack of cover, the company contends that since this site is not a sanitary landfill there is no need for daily cover. Even if daily cover was required, they also contend that core sand is adequate for cover material. A March 1, 1974 letter from C.E. Clark of IEPA stated that sand, ash and slag do not require daily cover. However, the landfill has continued to be cited for lack of daily cover. It would be in everyones best interest to get this matter resolved as soon as possible as it's been 12-13 years since it first came up.

This site is given a low priority and should be investigated on an as time allows basis. A recommendation for continued monitoring is given to this site for tracking of the progression (if any) of the fill area toward the Fox River. Monitoring should also continue for possible general refuse deposition.
